If you or someone you know is at risk of a heroin or painkiller overdose, you are strongly encouraged to get naloxone now.

By Colorado law, anyone is allowed to obtain and administer naloxone to help someone who may be experiencing an opioid-related overdose. Good Samaritan and 3rd party laws protect you from liability should you need to give it.

Naloxone can be obtained at pharmacies across Colorado. Through standing orders, naloxone is available without a prescription at many Colorado pharmacies for individuals at risk of overdose, those who know or work with someone at risk of overdose or first responders. Find out where to get naloxone at stoptheclockcolorado.org.

An overdose refers to the ingestion or application of a drug or substance that exceeds the quantities that are recommended, generally practiced or physiologically tolerated. If untreated, an overdose often results in death.

Opioid addiction doesn’t discriminate. It can affect anyone, be it a friend, a colleague, a family member or loved one, even yourself. If you or someone you know is taking opioids, or is at risk of opioid addiction, you should strongly consider obtaining naloxone in the event of an overdose.

Naloxone is a life-saving medication used to reverse an opioid overdose, and is available without a prescription at many Colorado pharmacies. Naloxone comes in a variety of forms, including the easy-to-administer NARCAN® Nasal Spray.
### SIGNS OF AN OPIOID-RELATED OVERDOSE INCLUDE:

- Pale or clammy skin
- Limp body
- Vomiting
- Patient is unresponsive
- Slow or stopped breathing
- Weak or no pulse
- Bluish purple lips/skin tones in lighter-skinned people; grayish or ashen tones in darker-skinned people

If you or someone you know experiences ANY signs of overdose, **call 911 immediately.**

### HOW TO ADMINISTER NARCAN® NASAL SPRAY

#### CALL 911 IMMEDIATELY

**STEP 1**  
Ensure recipient is lying down with head tilted back.

**STEP 2**  
Insert nozzle into one nostril and press plunger firmly.

**STEP 3**  
If no response after two to three minutes, administer second dose.

Stay with the person until emergency medical help is received.
